

Swisstrax vs. Competition

Why we meet your needs and exceed your expectations:

- ⊕ Swisstrax® carries on the tradition of Swiss design and precision in the research, development and manufacturing of our products.
- ⊕ Swisstrax® is manufactured in the U.S.A.
- ⊕ Swisstrax® uses a 4 point injection mold, which ensures better material distribution throughout the entire tile. Having material flow throughout multiple points in the tile provides superior strength to withstand commercial and light industrial applications. (Competitors use a single injection mold)
- ⊕ Swisstrax® is an official supplier to the SEMA show, Barrett-Jackson Auto Auctions, Ford Motor Company and the US Armed Forces.
- ⊕ Swisstrax® has a compressive strength of 5,120 psi.
- ⊕ Swisstrax® features 20% – 30% more connectors than any other competitor's tile to better secure your modular flooring system.
- ⊕ Swisstrax® support structure has no more than a 3/8" void. 'Voids' are gaps between the support structures underneath the tile. Smaller voids insure a stronger tile overall. (Competitors can have up to 1 1/4" voids)
- ⊕ Companies such as Bridgestone, Meguiar's, Rockstar Garage, Ford Racing, etc. have chosen Swisstrax® over the competition.
- ⊕ Any single Swisstrax® tile can be extracted from your flooring installation, regardless of its position within the system.
- ⊕ Swisstrax® is resistant to most oils, solvents, car fluids and acids including battery acid.
- ⊕ Swisstrax® is even resistant to Skydrol, the most corrosive hydraulic fluid we know of, as well as other hydraulic and brake fluids.
- ⊕ Our warranty is not prorated like many competitors and is a full 7 year warranty.
- ⊕ Swisstrax® tiles have a UV Stabilizer mixed in with their material as well as their color pigment, making them highly fade resistant (many competitors use a spray on UV coating that can wear away quickly).
- ⊕ Swisstrax® has a temperature tolerance of -22°F to +248°F
- ⊕ Due to the high quality and design of our products, we sell to NYFD for their fire truck bays with 80,000+ lb. equipment running over them as well as large aircraft hangars with commercial aircrafts.
- ⊕ Swisstrax has the stamp of approval from the USGBC (United States Green Building Council)
- ⊕ Swisstrax is LEED's certified for our Green products and recycling.
- ⊕ Swisstrax is ASTM tested and certified.
- ⊕ Swisstrax was awarded a California State Grant for our work with our new Ecotrax program of recycled rubber and recycled plastics.
- ⊕ We offer test certificates from various Countries including Europe and Australia.
